SUMMARY

Web developer and Information Systems Engineering student at UTN. I build full stack applications with Next.js, React, and TypeScript on top of PostgreSQL and Prisma, as well as data analysis tools in Python. I focus on clear interfaces, strong performance, and maintainable, tested code, from gathering requirements to shipping to production.

EXPERIENCE

Freelance Web Developer 2020 – Present

- Build custom websites and web applications for clients: requirements gathering, solution design, implementation, and deployment.
- Online auto parts catalog with product search and filtering, built with Next.js, TypeScript, and Tailwind CSS.
- Responsive institutional website for an elderly care residence, built with HTML and CSS.

PROJECTS

Finza — Personal finance app 2025 – 2026

Next.js · React · TypeScript · Prisma · PostgreSQL · Tailwind CSS · Vitest

- Multi-user app to track income and expenses, manage accounts, category budgets, and savings goals, with an analytics dashboard.
- REST API built with Next.js Route Handlers and a Prisma data layer on PostgreSQL; per-user data isolation and bcrypt-hashed passwords.
- API tests with Vitest and deployment with automatic database migrations.

Personal portfolio — ezequielgallardo.dev 2026

Next.js 15 · React 19 · TypeScript · CSS

- Statically generated bilingual site (Spanish and English) with technical SEO: per-locale metadata, Open Graph, JSON-LD structured data, and sitemap.
- Flicker-free light and dark themes, and scroll animations built with IntersectionObserver that respect the reduced-motion preference.

SKILLS

Frontend	React, Next.js (App Router), TypeScript, JavaScript, HTML, CSS, Tailwind CSS
Backend & data	Node.js, REST APIs, Prisma, PostgreSQL, Supabase, Python
Testing & quality	Vitest, Jest, Playwright, Testing Library, ESLint
Tools	Git, GitHub, Docker, Vercel
Analysis & design	UML, use case modeling, class, sequence, and state diagrams

EDUCATION

Information Systems Engineering In progress

Universidad Tecnológica Nacional (UTN), Argentina
